Findings

critical

Rule	WCAG	Page	Selector	Status	Snippet	Notes
image-alt	1.1.1	before.html	`img`	verified fixed	`<img src="data:image/svg+xml,%...">`	
label	4.1.2	before.html	`#email`	verified fixed	`<input id="email" name="email" type="email" value="" autocomplete="email">`	
label	4.1.2	before.html	`#quantity`	verified fixed	`<input id="quantity" name="quantity" type="number" value="4" min="1" max="50">`	
select-name	4.1.2	before.html	`#delivery`	verified fixed	`<select id="delivery"><option>Collect from workshop</option><option>Local delivery</option> </select>`	

serious

Rule	WCAG	Page	Selector	Status	Snippet	Notes
color-contrast	1.4.3	before.html	`.hint:nth-child(7)`	verified fixed	`<p class="hint" style="color:#9aabc0">Quotes remain valid for seven days.</p>`	

This document records automated findings and remediation work. Automated checks cover only part of accessibility requirements and cannot determine WCAG conformance on their own. The recorded scan engine and tested scope describe the checks performed. This is not a certification of compliance, not a legal opinion, and not a guarantee that the referenced site meets any accessibility standard. A conformance evaluation also requires manual testing, including assistive-technology and expert review. This report documents a good-faith accessibility remediation effort.

Scope and result

This is a fictional, controlled demonstration. Before: 4 axe rule groups reported findings. After: 0 violations in the tested WCAG A/AA tag set; the open dialog also had 0. This is not evidence that the entire page conforms to WCAG.

Implemented changes

- Associated visible labels with email, quantity and delivery controls.
- Supplied a meaningful alternative for the material illustration.
- Increased supporting-text contrast.
- Replaced the pointer-only submit control with a native button.
- Added invalid-email feedback, focus handling and a named dialog with keyboard containment and return focus.
- Added a status live region. Speech output was not tested.

Browser and keyboard checks actually performed

- reachable native submit button
- logical tab order
- invalid email feedback and focus
- named modal
- modal focus containment
- Escape closes dialog
- focus restoration
- keyboard confirmation
- status live-region DOM
- 320px reflow
- 200% text resize at 320px

Not checked

- screen reader speech and interaction
- real OS/browser zoom
- Safari/Firefox
- all WCAG criteria
- production Cloudflare browser scan workflow

Before fixture | After fixture | Raw browser evidence

Method: W3C evaluation-tools guidance. Automated checks require human evaluation.
